Lea Iodice

Chattanooga, TN | 508-826-4414 | lea.iodice3@gmail.com | https://www.linkedin.com/in/leaiodice/ | Portfolio

Data Engineer with experience building scalable Python and SQL data pipelines, designing dimensional data models, validating large-scale data migrations, and delivering trusted datasets for analytics and reporting. Experienced working with Snowflake, AWS, PostgreSQL, cloud data platforms, and large-scale data migration workflows, including transformation logic, schema design, validation frameworks, and automated ingestion. Skilled at translating technical and business requirements into reliable data products and collaborating across analytics, software engineering, autonomy, and business teams.

RELEVANT SKILLS & EXPERTISE

Programming Languages: Python, SQL, Bash, Linux
Data Engineering: ETL/ELT Pipelines, Dimensional Modeling, Data Transformation, Data Quality Testing, Data Validation, Schema Design, Workflow Automation, API-Based Ingestion, Analytics Data Modeling, dbt, DataBricks
Databases & Warehouses: Snowflake, PostgreSQL, IBM DB2, Teradata, Oracle Autonomous Data Warehouse
Cloud Platforms: Google Cloud Platform (GCP), Oracle Cloud Infrastructure (OCI), AWS
Data Tools: SQLAlchemy, PySpark, pandas, matplotlib, seaborn, Jupyter Notebooks
DevOps & Automation: Terraform, GitLab CI/CD, GitHub Actions, cron scheduling, REST APIs, Bash, Apache Airflow
Analytics & Reporting: Custom dashboards, SQL optimization, exploratory data analysis

PROFESSIONAL EXPERIENCE

Data Engineer *Unum | National Client Group* **01/2026 - 08/2026**

- Led team of 4 through validation efforts for an IBM DB2 to Snowflake migration, developing an automated Python and SQL framework that compared 8 million records per platform, identified data discrepancies, and generated validation reports for production readiness.
- Developed Snowflake SQL transformations and analytical views using CTEs, window functions, and multi-table joins to convert raw claims data into standardized, analytics-ready datasets.
- Designed reusable SQL validation pipelines to verify schema consistency, field mappings, row counts, business rules, referential integrity, and data completeness across source and target environments.
- Built scalable Python automation using SQLAlchemy and PySpark to execute validation workflows, generate exception reports, and reduce manual QA during migration testing.
- Implemented reusable data-quality checks in Snowflake to validate business rules, field mappings, referential integrity, duplicate records, null handling, data types, and derived metrics across millions of source and target records.
- Designed and maintained Snowflake staging, clean, and validation layers for large-scale DB2 migration data, including external stages, file formats, typed transformations, temporary tables, and reusable validation datasets.
- Implemented reusable data-quality checks in Snowflake to validate business rules, field mappings, referential integrity, duplicate records, null handling, data types, and derived metrics across millions of source and target records.
- Translated claims and policy business rules into SQL transformation logic for 100+ fields across two data warehouses.
- Investigated and resolved data-quality issues involving duplicate records, inconsistent source mappings, join behavior, and transformation logic, using Snowflake analytical functions and targeted exception reporting to improve migration accuracy.
- Created reusable Snowflake views supporting ad hoc analysis, migration reporting, and downstream business validation while maintaining consistent transformation and data-quality rules.
- Built reusable processes that support data transformation, structures, accuracy checking, and workload management for snowflake migration data validation procedures using snowsight, python, and SQL.

Cloud Engineer *Deloitte Consulting | Government & Public Services Industry* **05/2025 - 01/2026**

- Deployed automated Python data pipelines that collected Oracle Integration Cloud operational metrics through REST APIs, transformed raw responses into curated datasets, and generated scheduled reporting for engineering teams.

- Provisioned secure Oracle Cloud Infrastructure environments using Terraform and GitLab Actions, deploying Autonomous Data Warehouse, Autonomous Transaction Processing, networking, logging, streaming, and monitoring services through repeatable Infrastructure-as-Code.
- Designed reusable automation components that standardized deployment, monitoring, and operational reporting across multiple cloud environments.
- Worked closely with engineering teams to troubleshoot production issues, perform root-cause analysis, and improve workflow reliability.

Cloud Engineer *Deloitte Consulting | Deloitte Internal Oracle Tenancy Management* **01/2024 - 01/2026**

- Supported environment configuration, access management, and deployment planning across multiple Oracle Cloud tenancies.
- Collaborated with senior consultants and project teams to translate business requirements into cloud environment configurations, access management processes, and reporting support solutions.
- Leveraged OCI Data Science Notebooks and Python workflows to query cloud-hosted datasets and support exploratory analysis and reporting initiatives.

EDUCATION & CERTIFICATIONS

OCI Professional Architect | *Oracle Cloud* **06/2025**
MIT Applied Data Science | *Massachusetts Institute of Technology, Virtual* **04/2022**
Google Data Analytics | *Coursera, Virtual* **01/2022**
B.S. Biology | *California State University Channel Islands, California* **12/2021**
